Scheduled Download Utility

The **Scheduled Download Utility** is an add-on option for Classic systems enabling the automatic export of recorded data from inside the **Argus Graph** program.

Applications

The Scheduled Download Utility enables users to leverage the enormous data recording capabilities of the Argus Classic system for exporting and analyzing data collected and stored by the control system.

The Argus Classic System can record the state of any sensor or system parameter at sampling integrated data frequencies every 15 minutes. This data can be viewed and manipulated in both graphical and tabular form using the native Argus Graph program.

Once configured, any number of graph reports can be saved for later recall. The Scheduled Download Utility enables users to automatically export the contents of selected graph reports at defined intervals.

The data sets are exported as tab-delimited files so they can be imported into database and spreadsheet programs for further analysis and statistical manipulation.

Alternatives

While the Argus Graph program has excellent capabilities for graphical and tabular display of recorded data it does not contain any statistical analysis tools.

Features

- **Graphing -** Work from inside the Argus Graph program.
- Export Data Is pre-defined by saved graph results.
- Sample Intervals Data is exported at selectable sample intervals.
- Data Integration and Filtering Optional data integration and filtering options to reduce the size of larger data sets.
- . Daily, Weekly, or Monthly Sets Exported files can be broken into daily, weekly or monthly set.
- Manual or Automatic Manual (one time) or automatic (repeating) operation.
- Scheduled Task List Defines and edits multiple export file sets.
