# *Multi-User Add-On for Argus Titan Systems*

The Multi-User add-on provides simultaneous access to the Argus Control System for LAN or Internet connected client PCs.

Applications

The Multi-User add-on is designed for situations where there are several remote system operators who require simultaneous access to the control system. With it, remote users can have full password protected access to the system at any time, regardless of whether there are others currently using the system.

Alternatives

The standard version of the Argus Operator Program provides simultaneous access for one operator at the Local Argus Server PC and for one remote client. The Multi-User option is required for simultaneous access by 2 or more remote clients.

Features

- **Proprietary Client/Server Architecture** - Provides a **fast**, **secure**, and **bandwidth efficient** method for accessing your system over a LAN (Local Area Network) or via the Internet. (Not Web Browser Based)

- **Full Access** - Whether you are in the next office, at home, or thousands of miles away, it's just like being at the local Argus PC.

- **Automatic Synchronization** – Any screen design changes made at the client PCs are automatically synchronized with the Server PC and other clients.
